

HarvestIT

Open innovation and open source development of an advanced monitoring solution for large-scale solar thermal plants

Philip Ohnewein, Daniel Tschopp
and HarvestIT project team

HarvestIT: Open innovation and **open source** development of an advanced **monitoring** solution for large-scale solar thermal plants

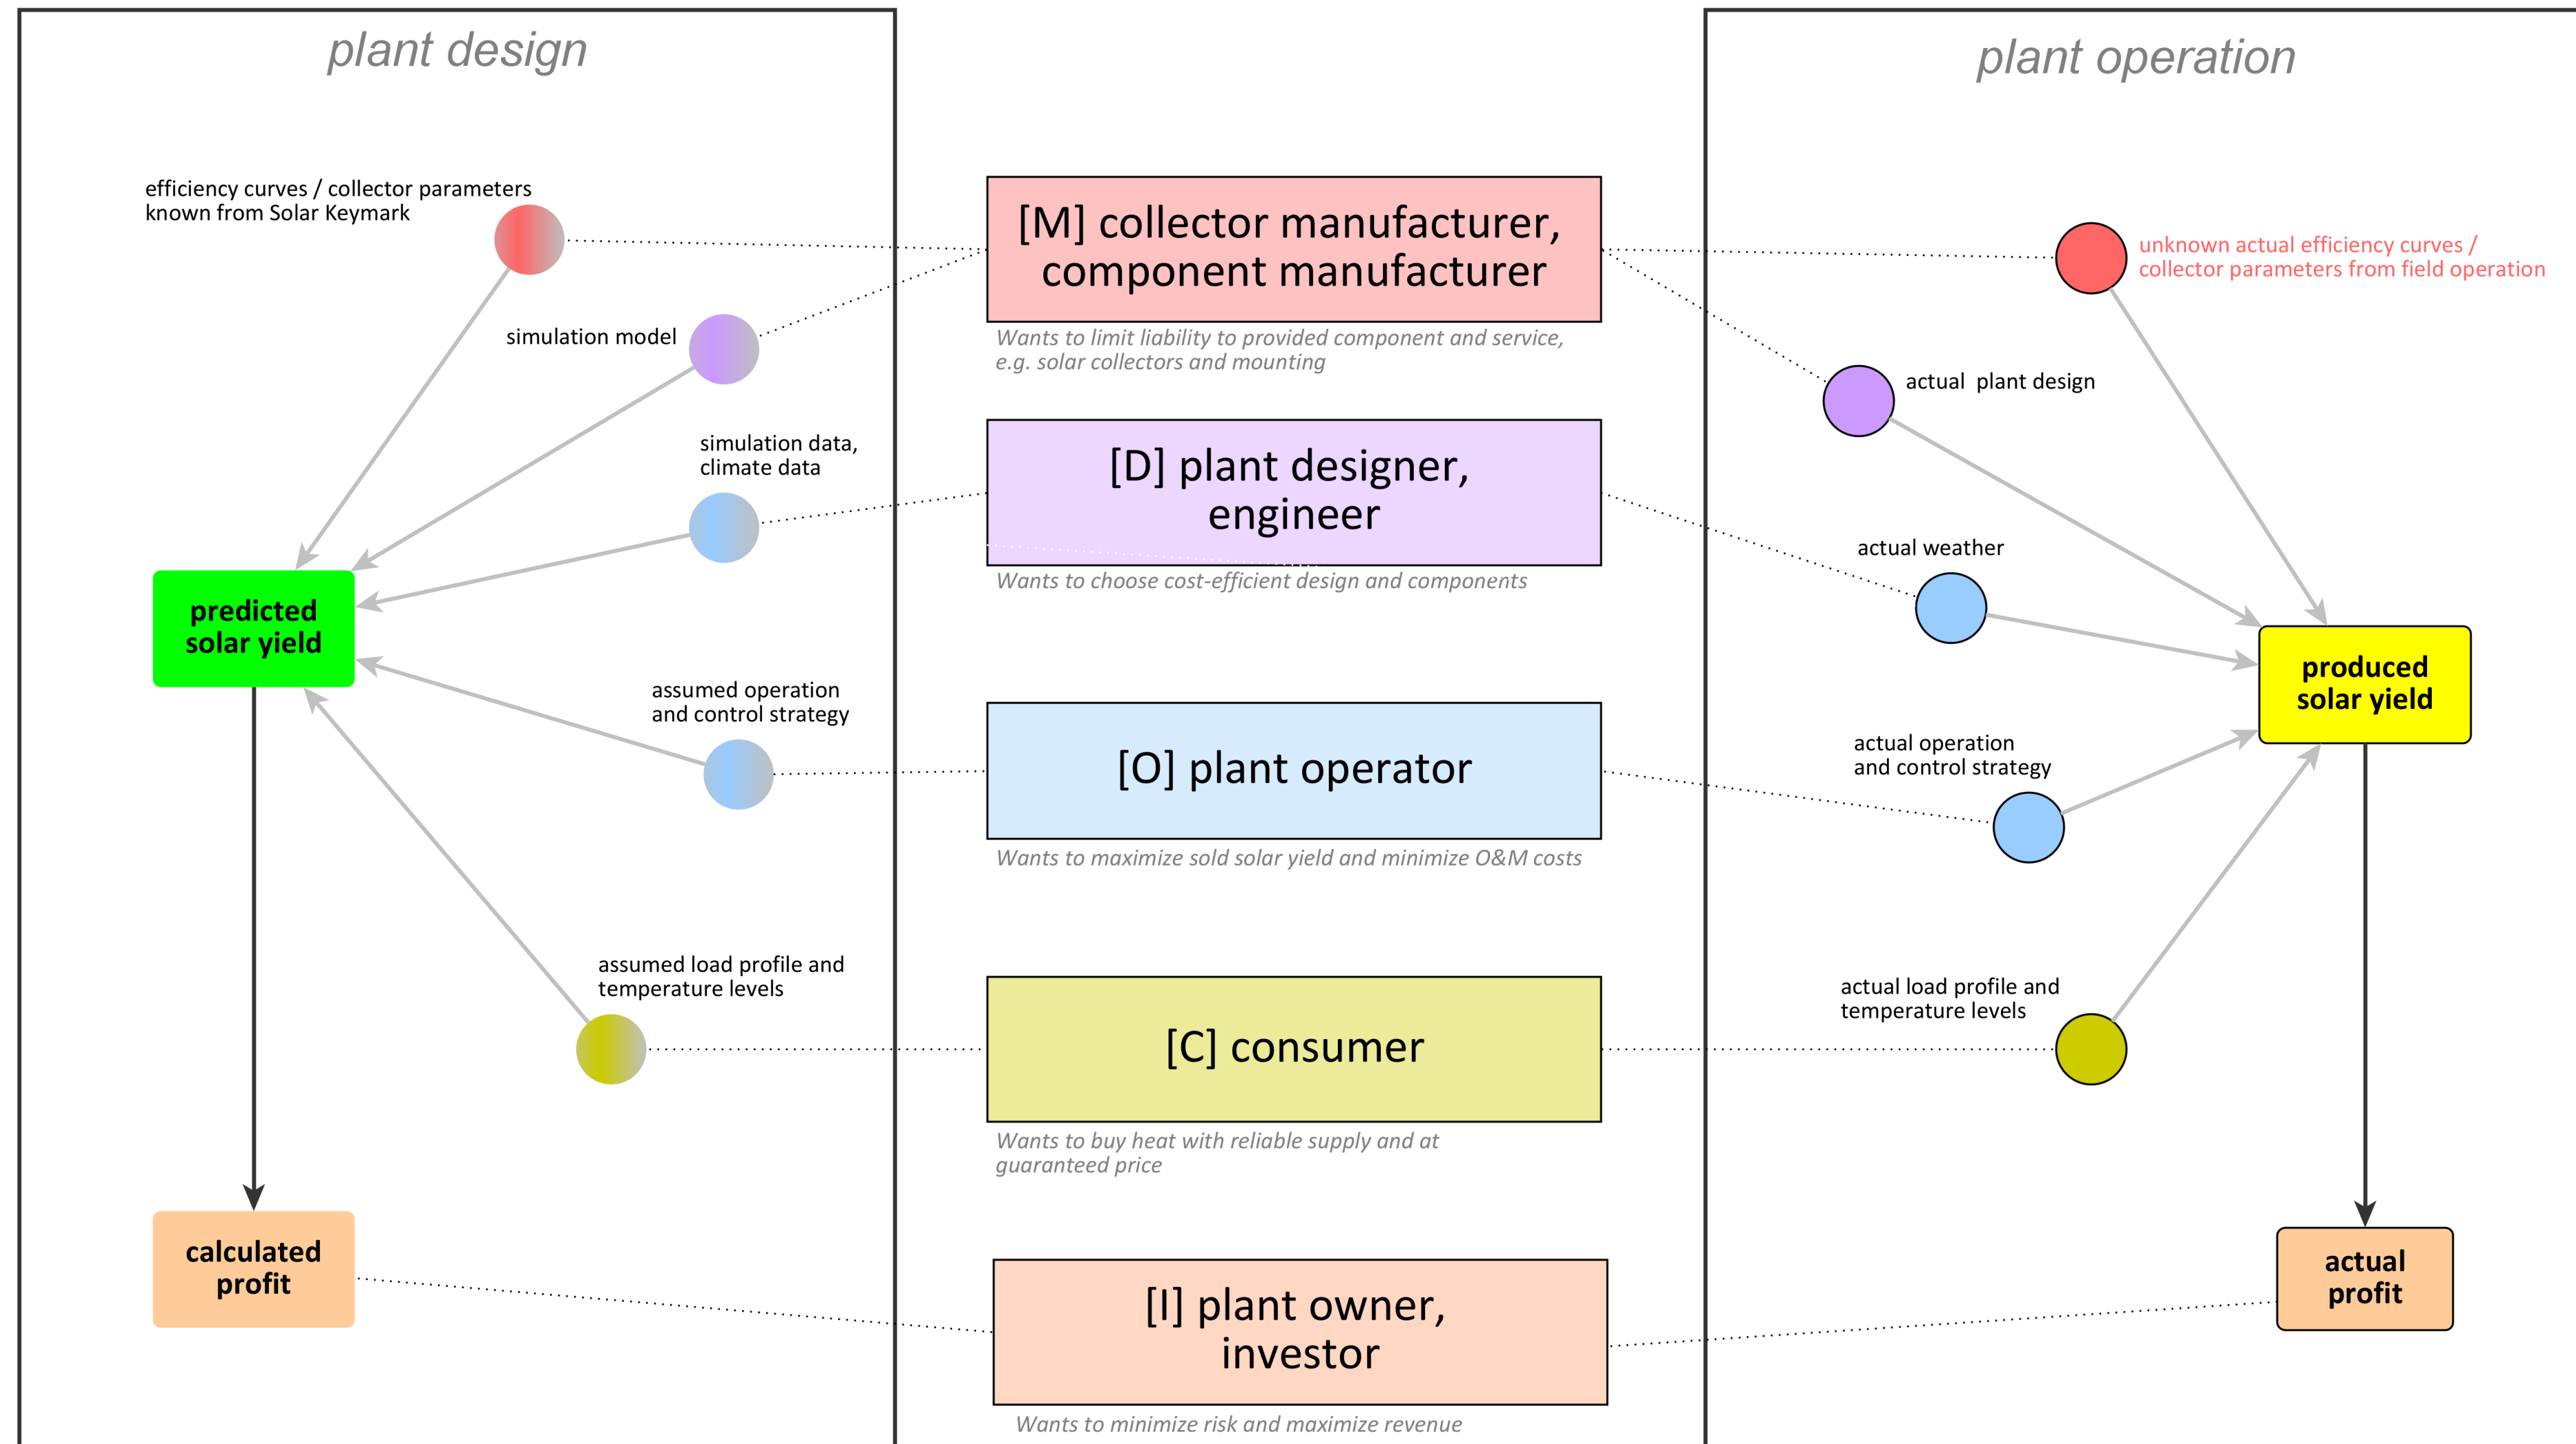

Source: Picfly.at Thomas Eberhard

Background and Need

- Plants have high initial investment costs, long amortization periods.
- Consistently high solar yield / good plant performance is essential.
- Performance assessment is difficult, even for experts.
- More and more data is collected, we should make use of it!
- On the market:
 - No dynamic in-situ test procedure.
 - No common standard evaluation software for power & yield guarantees.

Solar yield guarantees: Who is responsible for what?

Project HarvestIT

- **HarvestIT:** Advanced monitoring of large-scale solar thermal plants with open-source software solution
- Funding call: FFG – FastTrackDigital 1st Call
- Project duration: 2021-11 to 2023-10

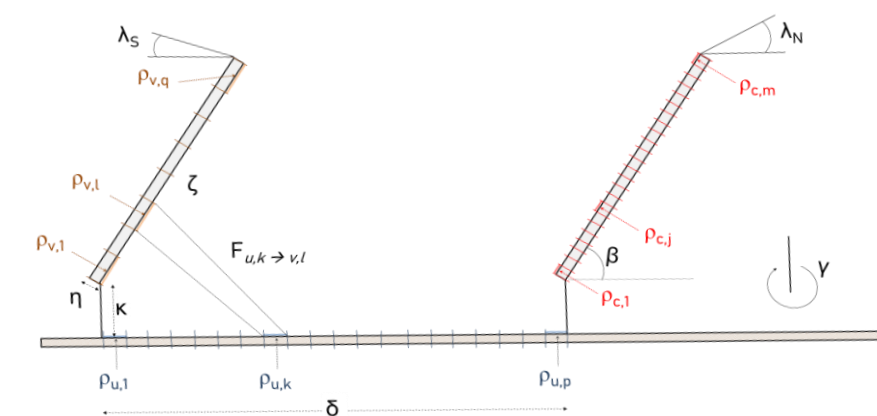

The vision: Create an open source monitoring software

Easy to apply. Based on current scientific findings.

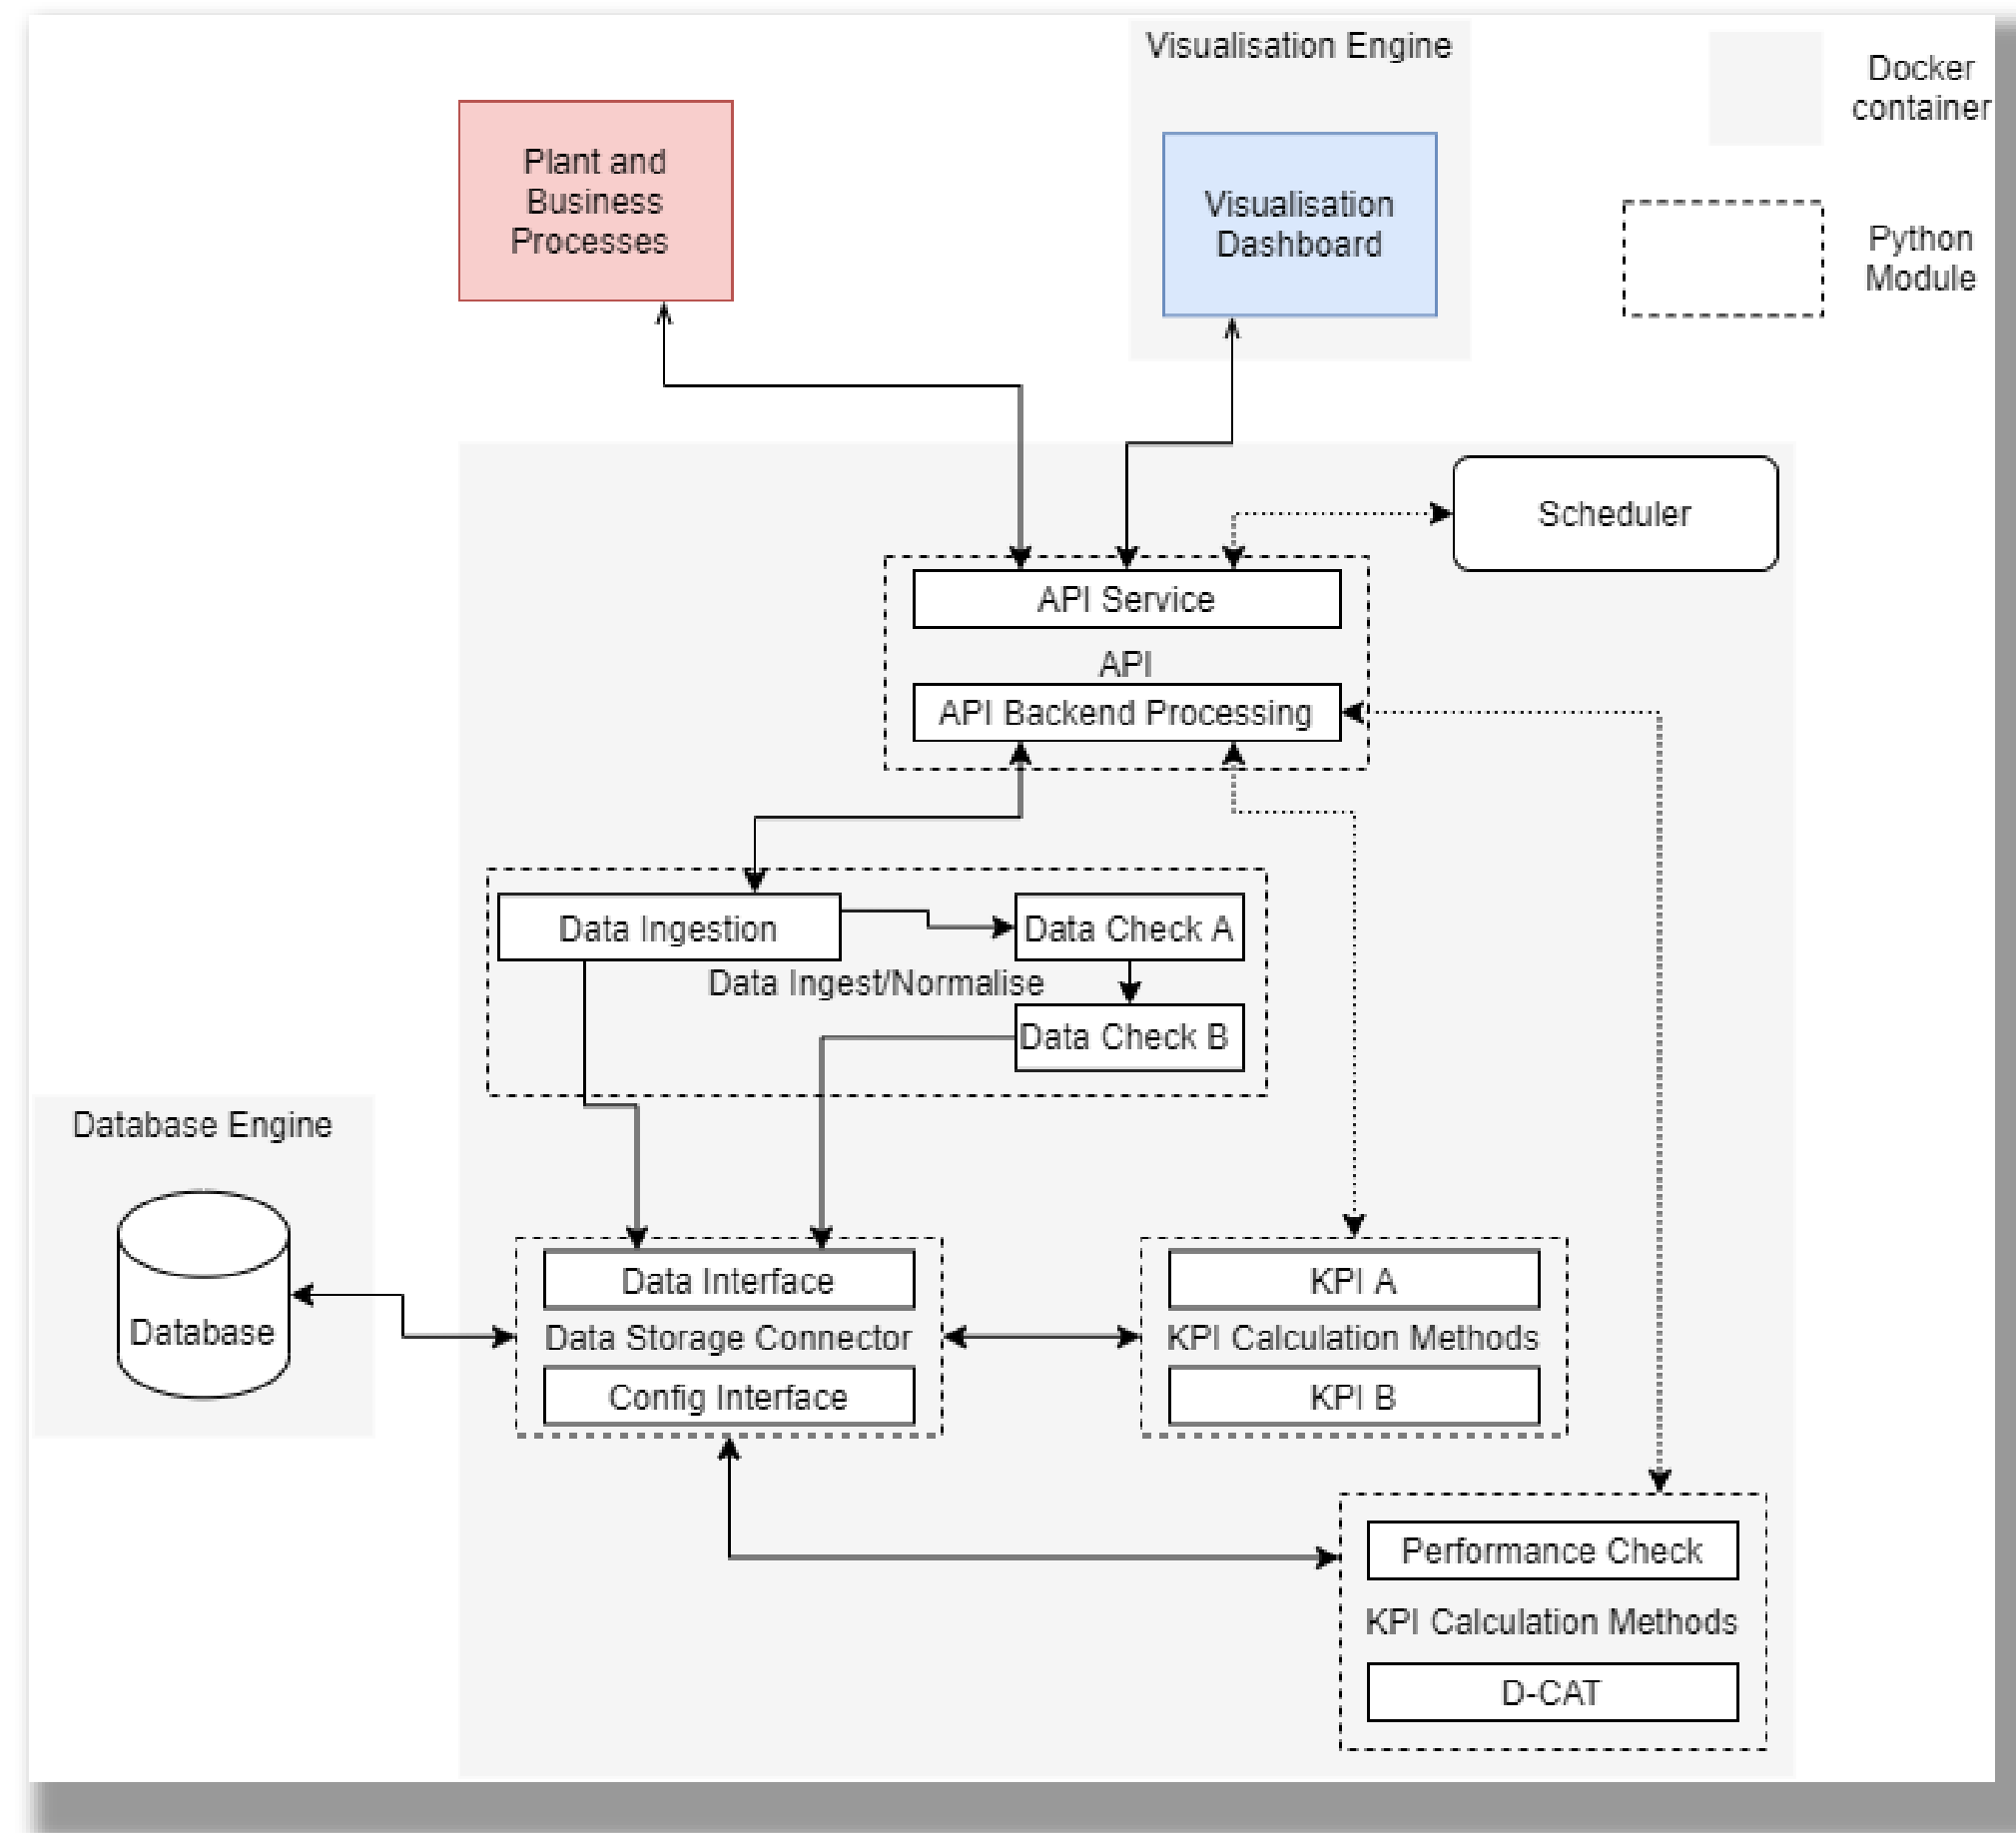

Collector array modeling

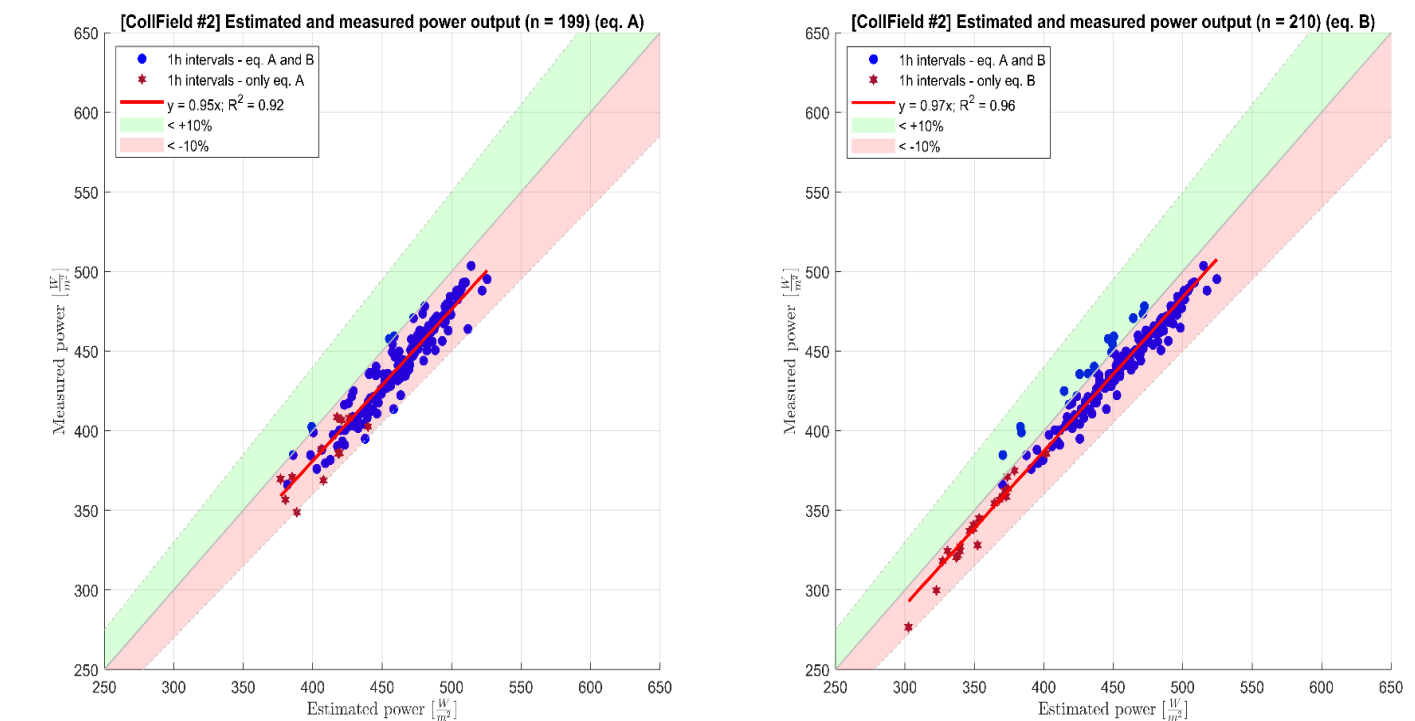

Radiation modeling

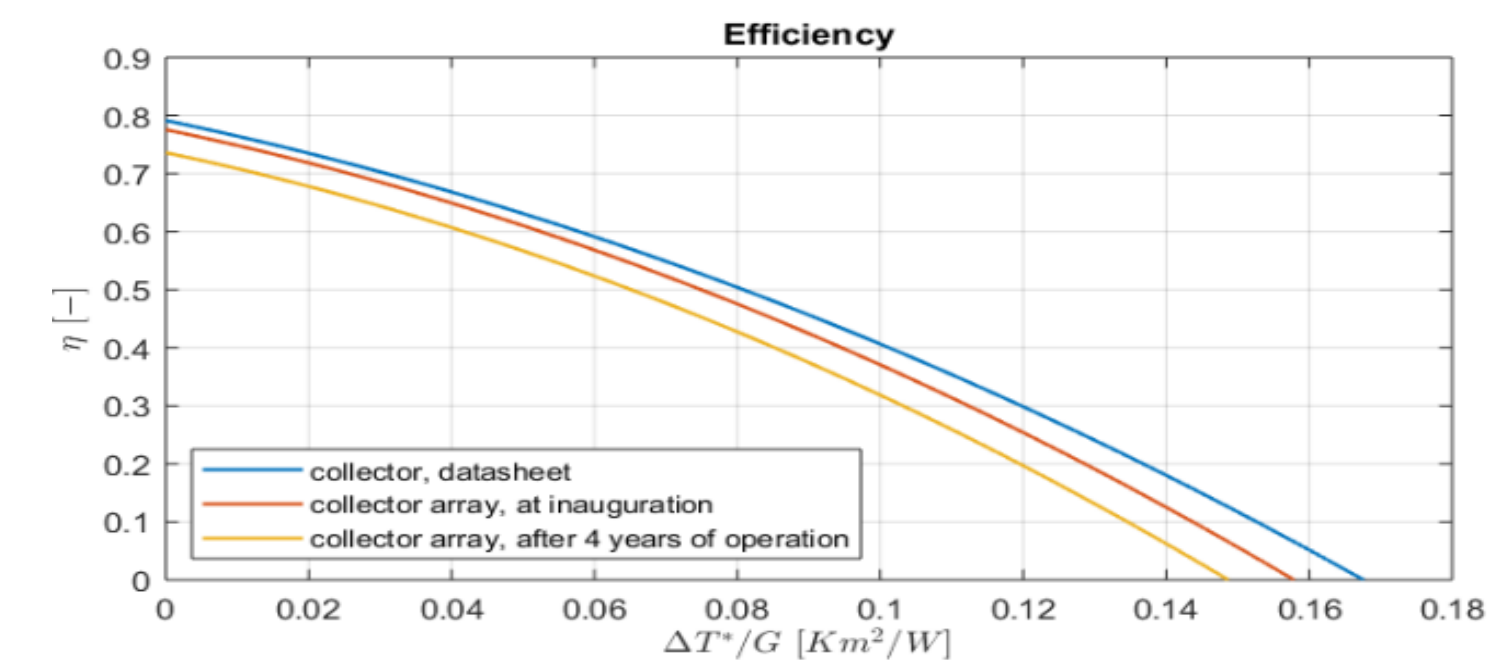

Mesurement uncertainty & error propagation

Performance Check (PC)

Dynamic Collector Array Test (D-CAT)

From paper to implementation

DRAFT ISO/DIS 24194 Solar energy — Collector fields — Check of performance

**DRAFT INTERNATIONAL STANDARD
ISO/DIS 24194**

ISO/TC 180/SC 4 Secretariat: SAC

Voting begins on: Voting terminates on:
2021-04-14 2021-07-07

Solar energy — Collector fields — Check of performance

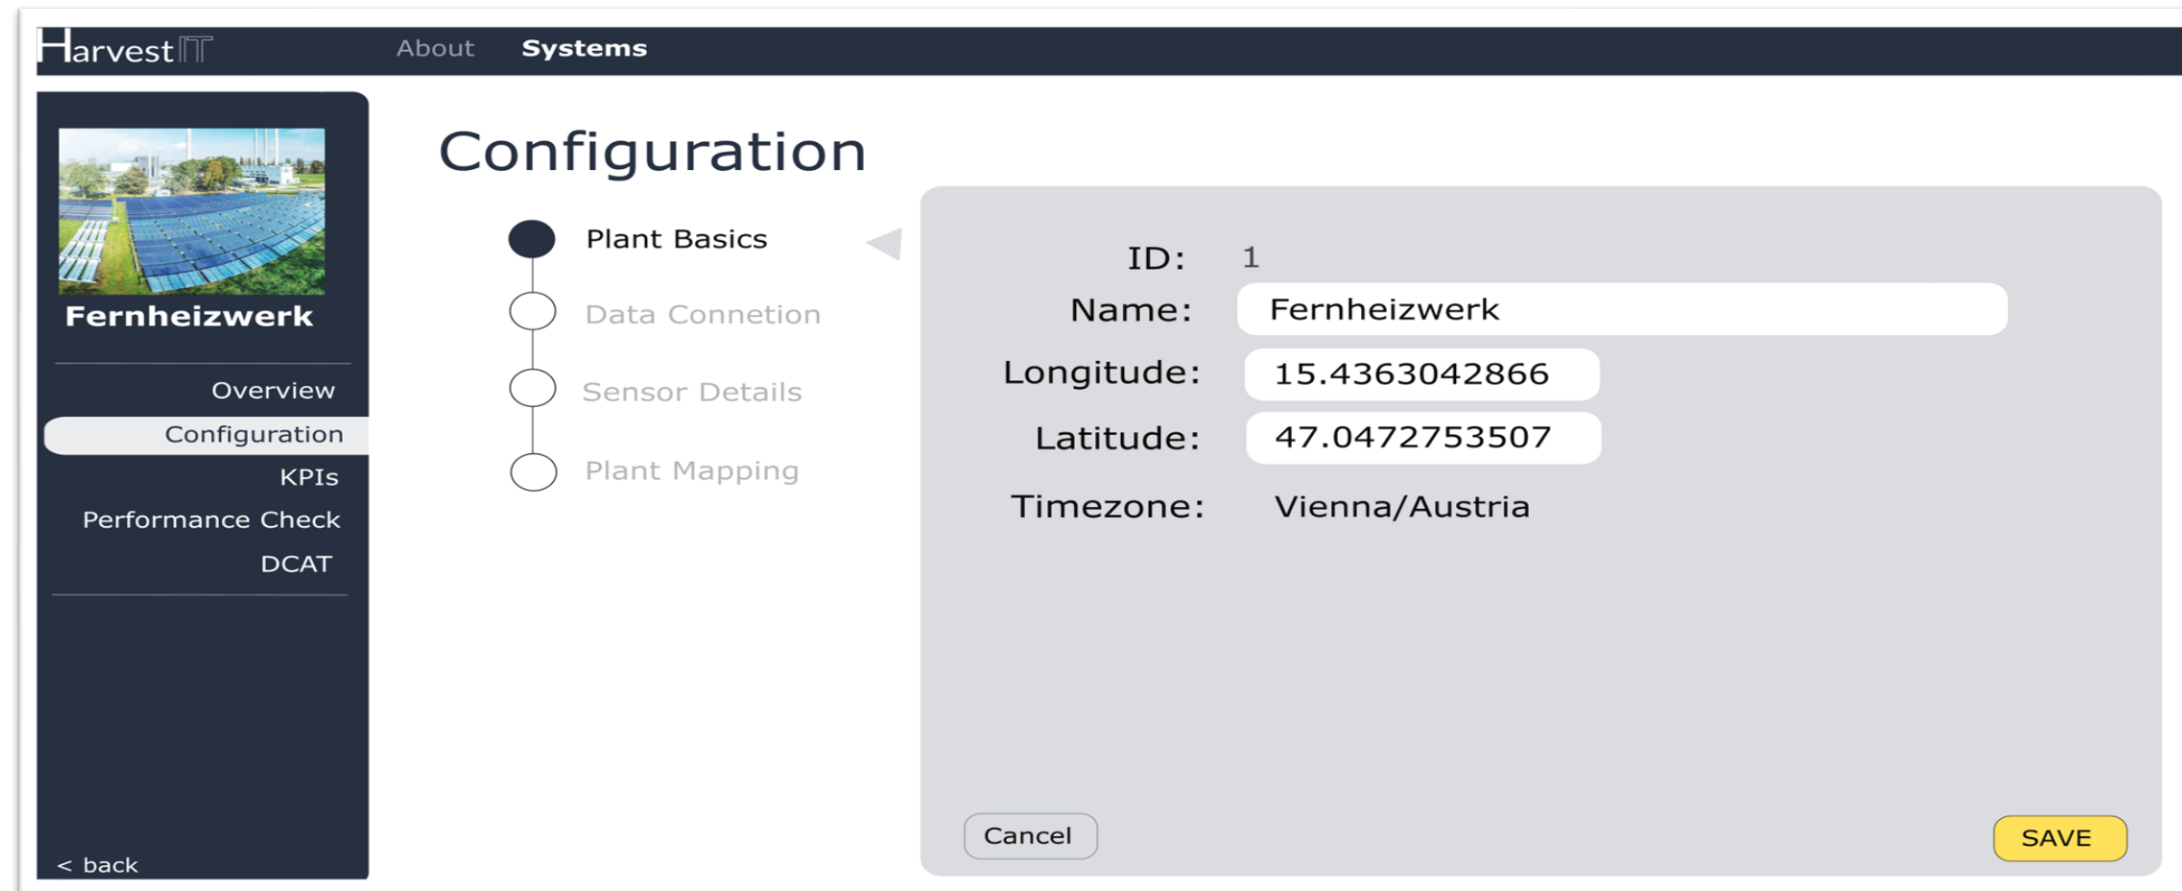

Performance Check (PC Method 'ISO DIS 24194', equation 2) for plant <anon>, data 2017-05-01 to 2017-05-31, n=70

Performance Check (PC Method 'ISO DIS 24194', equation 2) for plant <anon>, data 2017-03-01 to 2017-10-31, n=412

Open Innovation Campaign

Open 4 weeks from now: → 2022-04-30

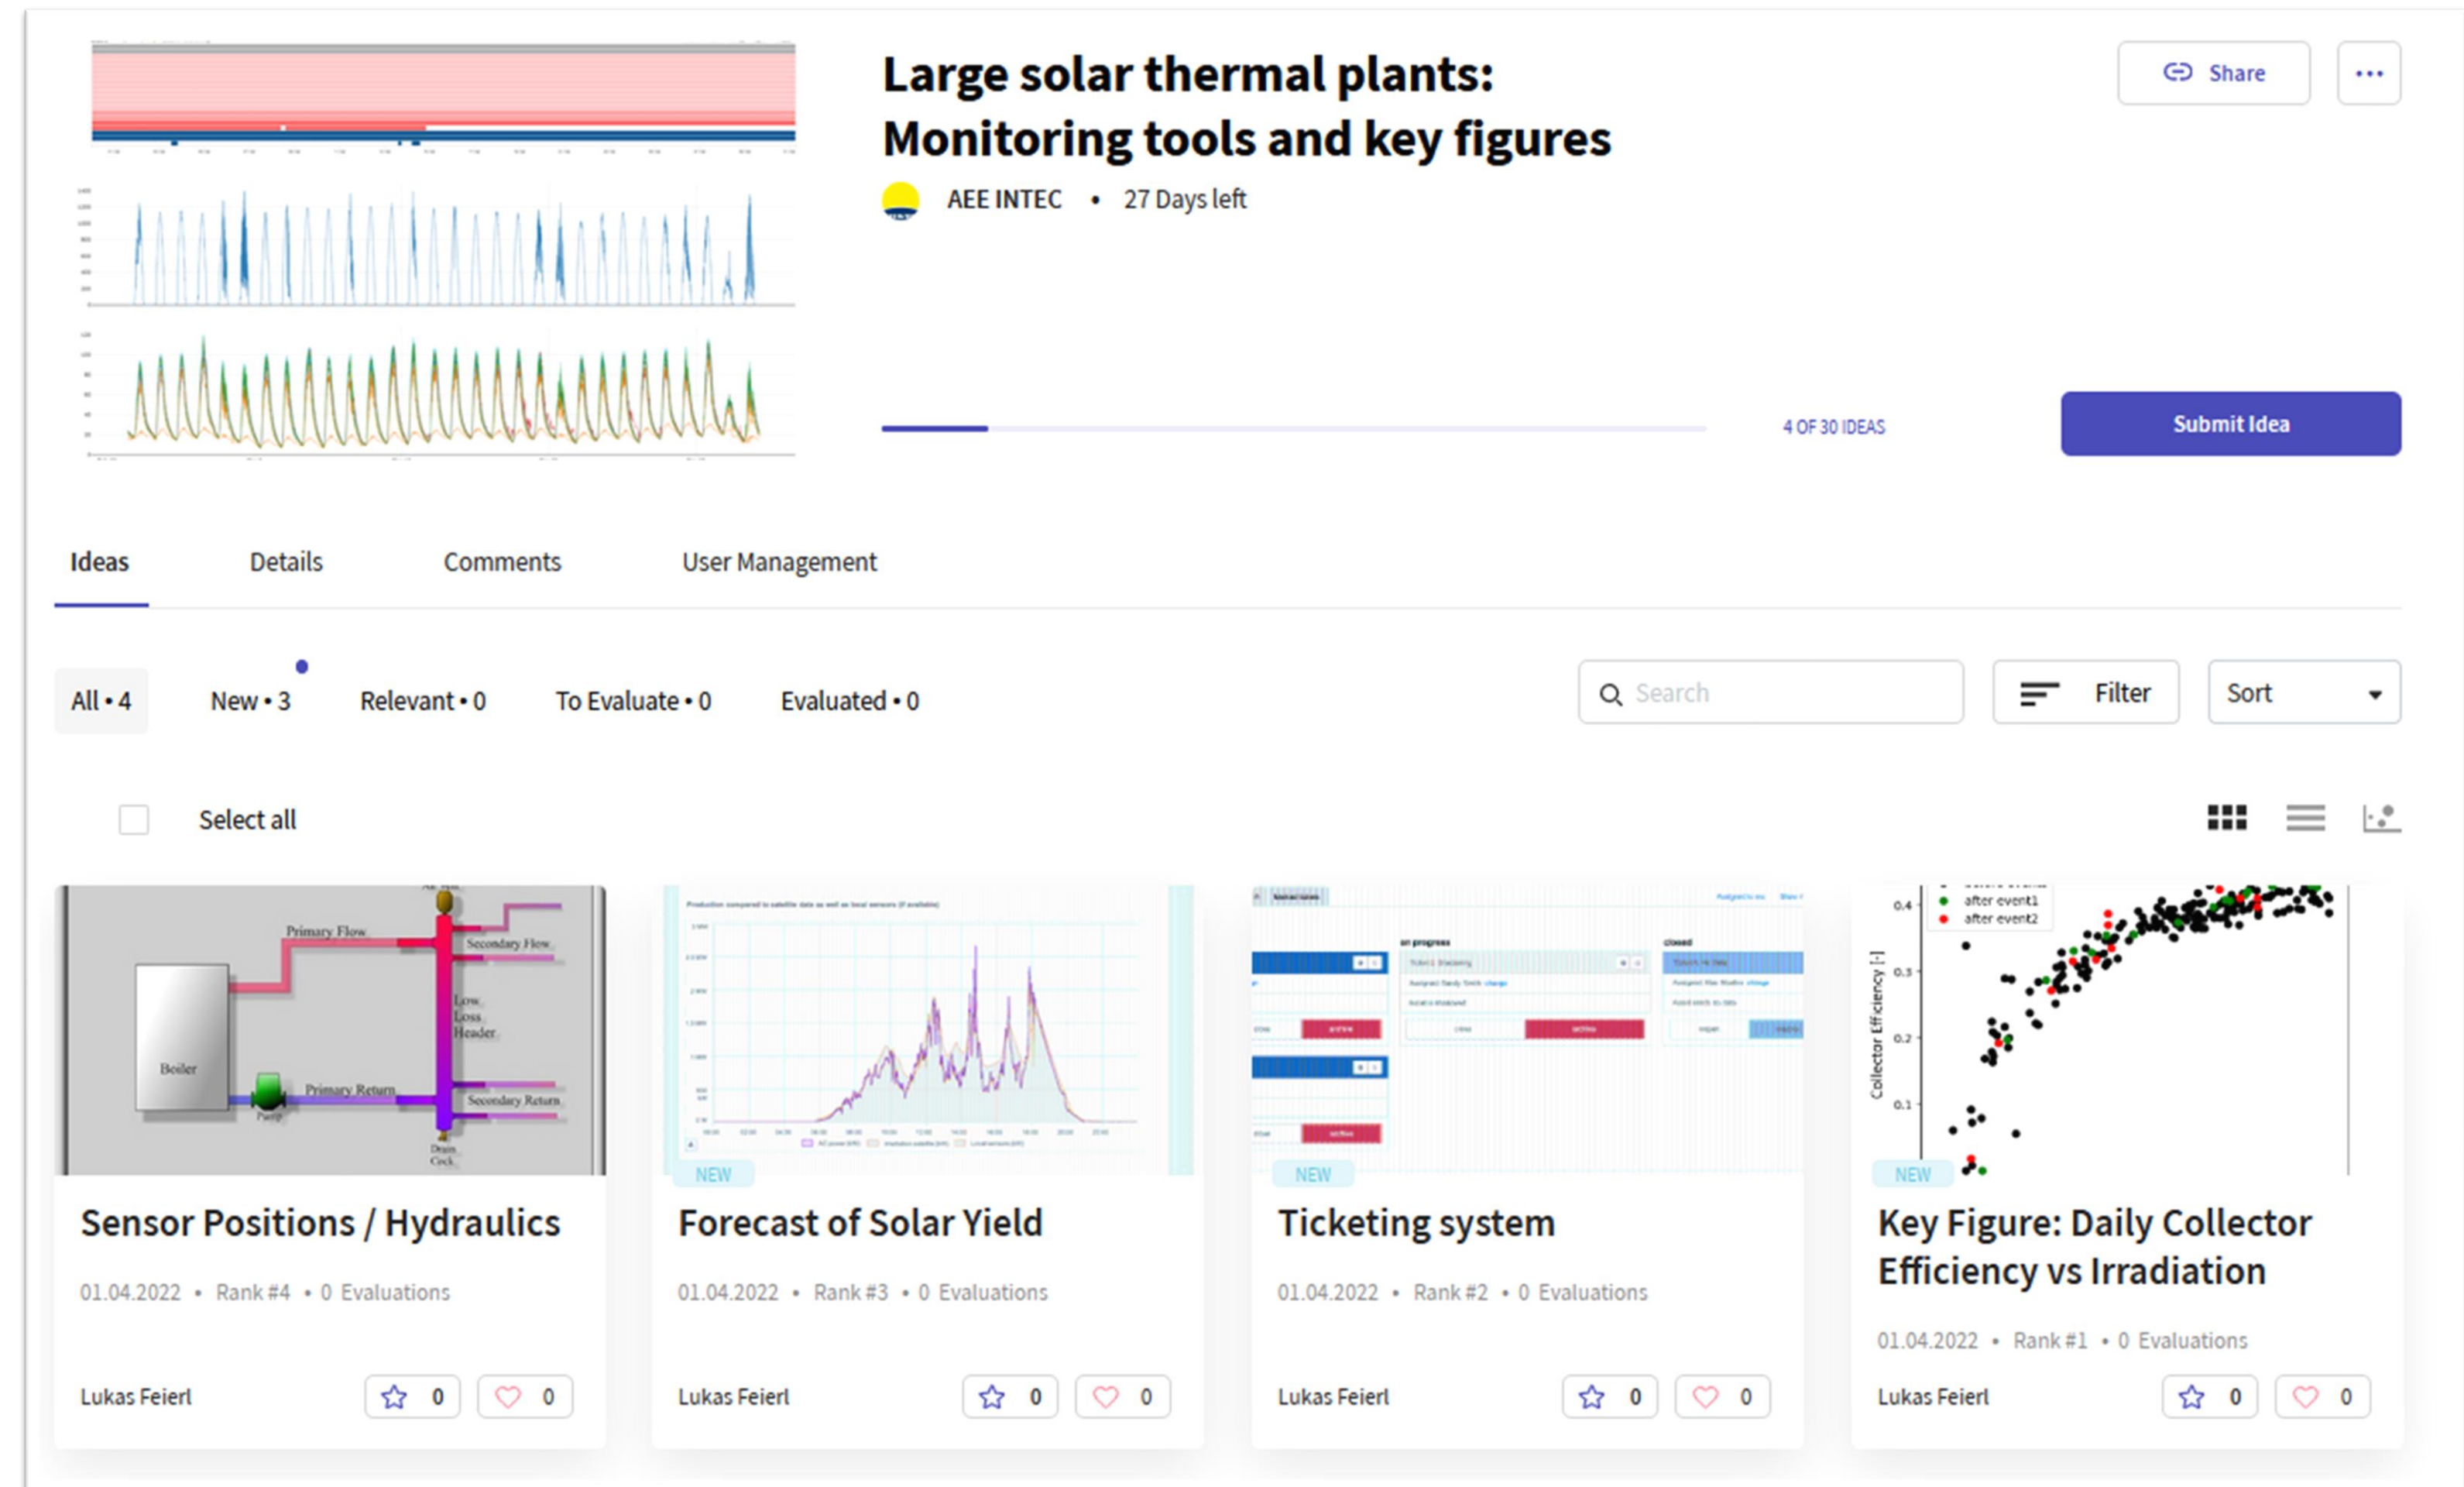

www.anyidea.ai

Open innovation platform

Goal

Integrate **user requirements** into the software tool.

- Allows to reach stakeholders around the globe
- Offers opportunities for exchange, discussion and networking.

The screenshot shows the Anyidea platform interface for an open innovation campaign. At the top, the campaign title is "Large solar thermal plants: Monitoring tools and key figures" by AEE INTEC, with 27 days left. Below the title are three line graphs showing data trends. A progress bar indicates "4 OF 30 IDEAS" and a "Submit Idea" button is visible.

The main content area displays a list of ideas under the "Ideas" tab. The filters show "All • 4", "New • 3", "Relevant • 0", "To Evaluate • 0", and "Evaluated • 0". There is a search bar, filter options, and a sort dropdown. Below the filters, four idea cards are shown:

- Sensor Positions / Hydraulics**: 01.04.2022 • Rank #4 • 0 Evaluations. Author: Lukas Feiert.
- Forecast of Solar Yield**: 01.04.2022 • Rank #3 • 0 Evaluations. Author: Lukas Feiert.
- Ticketing system**: 01.04.2022 • Rank #2 • 0 Evaluations. Author: Lukas Feiert.
- Key Figure: Daily Collector Efficiency vs Irradiation**: 01.04.2022 • Rank #1 • 0 Evaluations. Author: Lukas Feiert.

Each idea card includes a thumbnail image, a title, a date, rank, evaluation count, and author name. The "Key Figure" card features a scatter plot showing Collector Efficiency [·] on the y-axis (0.1 to 0.4) and Irradiation on the x-axis, with data points for "after event1" and "after event2".
